DETAILED ACTION

1. This communication is responsive to your preliminary amendment filed 7/10/06. Claims 1-20 are currently pending in this application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-20 are rejected under 35 U.S.C. 102(a) as being anticipated by Tsao et al. "MR angiography at high acceleration using feedback regularized SENSE and variable density k-space sampling" (Tsao).
4. Tsao discloses a MRI that uses variable density sampling for what is known in the art as a SENSE method. With this method k-space is sampled more densely at the center of k-space and sparsely at the areas adjacent the center of K-space. Tsao proposes that instead of generating a priory image for regularization, such regularization be made in a "feedback" manner. This is, the regularization image is obtained from the more densely sampled central area of k-space during normal SENSE acquisition. Tsao meets all limitations of the claims at issue.
5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Madore and Kellman et al. disclose variable density SENSE methods for MRI. Note the abstracts of their respective disclosures.
